

ROHITH M S

Applied AI & ML Engineering Intern | LLMs · Robotics · PyTorch · Deep Learning
rohithsuresh2107@gmail.com · +91 84389 30793 · [LinkedIn](#) · [GitHub](#)

EDUCATION

Indian Institute of Technology Indore (IIT Indore) 2025 – 2029
B.Tech — Metallurgy Engineering & Material Science | CGPA: 8.0 / 10

TECHNICAL SKILLS

Languages	Python, C++
ML / DL	PyTorch, Transformers, CNNs, Fine-Tuning, Model Evaluation, Deep Learning
LLM / GenAI	Hugging Face, Tokenization, Prompting, Groq API (Llama-3), Generative AI, Applied AI
Robotics	SLAM, Multi-Agent Systems, Decentralized Control, ROS, Embodied AI, Sensor Fusion
Tools	Streamlit, NumPy, Pandas, Git, Linux, Jupyter, Claude Code

SELECTED AI PROJECTS

Capital Pulse — AI Stock Forecasting Chatbot Streamlit · Groq · ARIMA Personal Project • Built Streamlit dashboard integrating ARIMA forecasting with Groq's Llama-3.3-70b agent for RAG-based Buy/Hold/Sell sentiment analysis of live stock data and financial news. • Engineered robust data pipeline with IQR-based outlier handling, stationarity correction (ADF testing), and real-time chat interface powered by Groq LPU for low-latency inference.	2025
Swayaan — Decentralized Multi-Agent Search & Rescue System Research Initiative Conceptual Design • Scoping a decentralized multi-agent robotic system for autonomous search and rescue with distributed exploration, consensus-based coordination, and collision avoidance. • Planning intelligent exploration (frontier-based, wall-following), task allocation via auction mechanisms, target detection via Bayesian inference and HMMs, and velocity obstacle methods for multi-agent safety.	2025
GPT-Style Transformer from Scratch PyTorch Personal Project • Built decoder-only Transformer (GPT-2 architecture) from scratch in PyTorch with multi-head self-attention, causal masking, positional encoding, and autoregressive generation. • Achieved 68% training loss reduction (4.17 → 1.3) on Tiny Shakespeare through learning rate scheduling and regularization; applicable to LLM and VLA pre-training.	2025
Sensor-Fused SLAM System ROS / C++ Academic Project • Fused IMU and LiDAR streams for real-time mapping using Extended Kalman Filtering; built occupancy-grid pipeline with loop-closure detection and real2sim data transfer for offline validation.	2025

ACHIEVEMENTS

- Achieved 68% training loss reduction (4.17 → 1.3) on GPT-2 through systematic optimization and built a full-stack AI application integrating financial data with LLM agents.
- Proficient in Claude Code, PyTorch, and applied AI engineering with focus on real-world problems in robotics and deep learning.

Available to join first week of May 2025 · Open to relocation to Bengaluru
